

## **INSTRUCTION FACIAL PARESIS PICTURE SERIES + VIDEO SERIES**

Priv.-Doz. Dr. Andreas Kehrer

Please ensure normal lighting conditions, high resolution images if possible and please focus on the face. Do not blur. Hold the camera at eye level (do not shoot from the bottom up) and look straight into the lens. Upper body upright, preferably standing. Ideally, the pictures should be similar to the distance in your passport photo.

Photos:

1. frontal view normal/relaxed
2. eyebrows raised
3. eyes relaxed closed
4. eyes squinted tightly but not to the maximum
5. wrinkle nose
6. smile, as wide and symmetrical as possible, **with mouth closed**
7. smile, as wide and symmetrical as possible, **with mouth open**
8. show lower and upper teeth (say "eeeeehhhh" very broadly)
9. point mouth ("kissing mouth")
10. pull corners of the mouth down sharply (works best with chin thrust forward)

Videos:

1. eye closure: video start with eyes open, 2 x relaxed and 1 x firmly close/open eyes
2. smile with **closed mouth** (first show normal facial expression and then smile 3 x as wide and symmetrical as possible)
3. laugh with **open mouth** (first show normal facial expression and then smile 3 x as wide and symmetrical as possible)

**Please save and upload the recordings in this order.**

Many thanks.

PD Dr. Andreas Kehrer
